

Cross-Connection Control Program Support

Our team of industry-leading professionals is adept at navigating the complexities of water system compliance, offering tailored assessments that go beyond mere regulatory adherence. We provide comprehensive insights and actionable recommendations, ensuring not just compliance, but meaningful improvements in the resilience, safety, and efficiency of your water infrastructure.

With West Yost, you're not just meeting standards; you're elevating the entire quality and operation of your water system.

PROTECT YOUR WATER WITH OUR CROSS-CONNECTION CONTROL TEAM

Our support team is well versed in the new Cross-Connection Control Policy Handbook and can provide support on the following requirements:

Cross-Connection Control Plan: Prepare Cross-Connection Control Plans in accordance with the Cross-Connection Control Policy Handbooks.

Hazard Assessments: Perform initial or follow up site hazard assessments; determine the degree of hazard at sites; confirm appropriate backflow prevention assembly present for hazard.

Cross-Connection Control Program Support: Program management and support in backflow testing notifications and tracking.

Standards and Details Development: Draft of Standard Specifications, Details, and Drawings related to backflow prevention assemblies.

Ordinance Assistance: Update or create ordinance language to establish authority to enforce the Cross-Connection Control Policy Handbook.

Plan Review: Review of proposed construction plans, plumbing plans, irrigations plans for compliance with Agency's Specifications and Standards Drawings and Cross-Connection Control Policy Handbook Compliance.

User Supervisor Program: Develop program requirements, materials, and conduct User Supervisor Training in-person or by videoconferencing. Ability to conduct the training in English or Spanish.

Cross-Connection Shutdown Tests: Perform visual or a pressure differential cross-connection control shutdown tests.

SUCCESS STORIES

Kirkwood Meadows Public Utilities District:

West Yost is developing the District's Cross-Connection Control Plan and performing the initial hazard assessment for their existing customers. West Yost will be performing pressure differential tests on identified services to confirm that cross-connections are not present.

City of Milpitas:

West Yost is assisting the City in developing their Cross-Connection Control Plan and updated Cross-Connection Control Ordinance per requirements of the Cross-Connection Control Policy Handbook. West Yost was asked to provide the City with program recommendations to strengthen their program and engage other departments required to implement the City's program.
